

Statement of Work (SOW)

1. Project Overview

This project involves the development of an AI-powered agent to be integrated within WhatsApp Business. The purpose of the agent is to support freelancers on the platform by engaging with incoming chat users and facilitating meeting bookings.

2. Scope of Work

The AI agent will be designed to operate within WhatsApp Business conversations. Its functionality will be limited to identifying user intent related to booking a meeting and collecting required information to support that process.

The agent will initiate interaction with users upon receiving a message. It will guide the conversation toward determining whether the user is interested in booking a meeting with the freelancer.

If booking intent is identified, the agent will collect the following information:

- First name
- Last name
- Email address
- Service of interest
- Preferred meeting time

Once we have all the information the backend will send the booking invite email to the customer and relative person.

The agent's conversational scope is strictly limited to intent detection and information collection related to meeting bookings.

If the booking intent is not identified, the agent will run an **x** number of feedback loop to fetch the required information after which it will stop.

3. Deliverables

- AI agent configured to operate within WhatsApp Business chats
- Defined conversation flow for intent detection and data collection
- Integration of the AI agent into the client's WhatsApp Business environment
- Booking invites email flow.

4. Assumptions

- The AI agent will only engage in conversations related to meeting booking intent
- All required access to WhatsApp Business will be provided by the client
- The client will define or approve the exact fields required for information collection
- A **SendGrid** account will be provided by the client for emails.

5. Exclusions

The following are explicitly out of scope:

- Providing information about freelancer services
- Discussing pricing, offerings, or project details
- Handling general inquiries or extended conversations beyond booking intent
- Any integrations beyond WhatsApp Business
